Sanjish Maharjan

SOFTWARE DEVELOPER

PROJECTS

IT Hub:
Built an advanced IT Club site with React and Node.js, offering a top-notch user experience. Our standout features included a personalized recommendation system powered by cosine similarity, fostering individualized engagement. A dynamic discussion portal served as a hub for collaboration, while real-time news kept users abreast of tech developments

Deepfake Detection using ViT:
Currently pioneering a groundbreaking Deepfake Detection project employing Vision Transformer technology, a major endeavor at college. Leveraging advanced AI, this project aims to identify and combat deceptive media content.
